

Who we are

Often entrepreneurship is associated exclusively with those who want to pursue a business venture; however we at Saffirm care to differ.

Saffirm focuses on identifying and developing pupils' entrepreneurship skills.

Skills developed by students can be applied to their personal life, potential career, place of work and potential business ventures.

What we do

Saffirm conduct interactive workshops within Educational Institutions across the UK.

Workshops cover a number of Entrepreneurial skills: **Leadership, Networking, Decision Making, Problem Solving, Unique Selling Point, Self Motivation, Purpose, Creativity, Attitude and Self Management.**

Saffirm's workshops are engaging and seek to raise the confidence of pupil's. Additionally workshops have a mixture of realism and academic exercises, whereby the pupils have an input in what they learn; in turn making their experience more enjoyable and memorable. Furthermore, the format of workshops will be tailored to the objectives and culture of the participating organisation.

Colleges & Secondary Schools

Here, seeds are planted at an early age so that young people can understand how entrepreneurship works and how the subjects learnt at school are of importance as skills developed will equip them well for the future. Workshops provide a motivational aspect to it as our facilitators are fairly young, and students are likely to be able to relate to them.

Universities

It became apparent that the growing unemployment rate, increased competition amongst those students seeking a graduate job. For final year and prospective placement students we run an 'Added Value Degree' workshop that teaches students how their Entrepreneurial skills can differentiate them amongst their peers; as an increasing number of employers are looking for potential employees that embrace entrepreneurial education and skill development.
